SURVEY NOTES

This survey was made by John C. Schulke, a Registered Land Surveyor in the State of Wisconsin, for the U.S. Department of Agriculture, Forest Service. The purpose of the survey was for recovery, establishing, marking and perpetuating the corners and boundary lines of the U.S. Government Land on the perimeter and within Sections 3, Township 37 North, Range 12 East, Fourth Principal Meridian, Forest County, Wisconsin.

The original Government survey of the township boundary was done by Alfred Millard, U.S. Deputy Surveyor, in May and June of 1858. The original Government subdivision survey of this township was done by William E. Daugherty in 1859. A Dependent Resurvey was done by Wesson Cook and approved by the General Land Office in 1937 for the North township line and the North two miles of the East township line.

The bearings between corner positions are true bearings as determined by reference to solar observations. The accuracy of this survey exceeds the State requirement for closure of 1 in 3,000. Corners recovered or established by this survey are marked as described in the map legend. Each monumented corner is referenced to blazed, scribed, painted and tagged bearing trees. Tie bearings are magnetic, and not corrected for declination.
